

CropMix DDP[®] rate guide

Dry Fertilizer Coating & Foliar

Example Calculations:

200 # fert/A X 3 lb. CropMix DDP/ton = 0.3 lbs. CropMix DDP/A

Pounds of CropMix DDP [®] /Acre	Elemental Pounds/A Equivalence				
	Zinc	Manganese	Iron	Copper	Boron
As Part of a Dry Starter Fertilizer or Broadcast					
0.1	0.2	0.2	0.01	0.01	0.02
0.2	0.3	0.3	0.02	0.02	0.04
0.3	0.5	0.5	0.03	0.03	0.1
0.4	0.6	0.6	0.04	0.03	0.1
0.5	0.8	0.8	0.04	0.04	0.1
0.6	0.9	1.0	0.05	0.05	0.1
0.7	1.1	1.1	0.1	0.1	0.1
0.8	1.2	1.3	0.1	0.1	0.1
0.9	1.4	1.4	0.1	0.1	0.2
1.0	1.5	1.6	0.1	0.1	0.2
1.25	1.9	2.0	0.1	0.1	0.2
1.5	2.3	2.4	0.1	0.1	0.3
1.75	2.7	2.8	0.2	0.2	0.3
2.0	3.0	3.2	0.2	0.2	0.4
2.25	3.4	3.6	0.2	0.2	0.4
2.5	3.8	4.0	0.2	0.2	0.5
3.0	4.6	4.8	0.3	0.3	0.5
3.5	5.3	5.6	0.3	0.3	0.6
4.0	6.1	6.4	0.4	0.3	0.7

Foliar application rate and timing – For field and vegetable crops, apply at 3 oz/ac.

Mixing instructions for foliar applications - When mixing Wolf Trax Cropmix DDP with other products, conduct a compatibility test (jar test) before adding the products to a full tank to ensure mixability. It is also recommended to use 50 mesh or coarser screens on all nozzles. Fill the tank to 1/3 to 1/2 full with clean water. **Add a compatibility agent into the tank.** With the agitator running, slowly pour Wolf Trax Cropmix DDP into the tank.

When mixing CropMix DDP with fertilizer, the maximum load rate for Wolf Trax DDP products is 17 to 20 pounds of DDP products per ton of fertilizer.
